# SAFETY SENSOR FOR AUTOMATIC SLIDING DOORS (according to EN 16005 and DIN 18650)

User's Guide for software version 0300 and higher (refer to tracking label on product)

- IR-curtain width adjustment
- 2. IR-lenses
- 3. cover
- 4. main connectors
- push button 5.
- DIP-switch 6.
- 7. IR-curtain angle adjustment knob

## ACCESSORIES

DESCRIPTION

BA: Bracket accessory

CA: Ceiling accessory

RA: Rain accessory

**BEA Remote control** 

CDA: Curved door accessory

### LED-SIGNAL

LED flashes red-green

LED flashes quickly

### INSTALLATION

fixed firmly to avoid

extreme vibrations.

MAINTENANCE

Do not cover the sensor.

Avoid moving objects and light sources in the detection field.

Avoid highly reflective objects in the infrared field.

It is recommended to clean the optical parts at least once a year or more if required due to environmental conditions.

For complete cleaning, remove both windows by inserting a screwdriver into the notches located between the two windows.

Do not use aggressive products to clean the optical parts.

## SAFETY

the door control unit and the door cover profile must be correctly earthed.

Only trained and qualified personnel may install and setup the sensor.

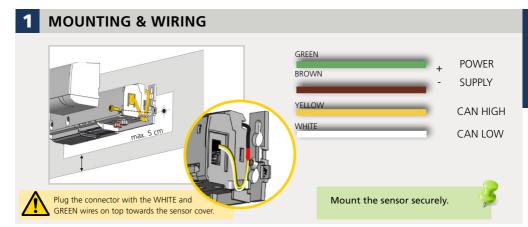

Always test the good functioning of the installation before leaving the premises.

the warranty is invalid if unauthorized repairs are made or attempted by unauthorized personnel.

- The sensor cannot be used for purposes other than its intended use.
  - The manufacturer of the door system incorporating the sensor is responsible for compliance of the system to applicable national and international regulations and safety standards.
  - The installer must read, understand and follow the instructions given in this manual. Improper installation can result in improper sensor operation.
  - The manufacturer of the sensor cannot be held responsible for injury or damage resulting from incorrect use, installation or inappropriate adjustment of the sensor.

# **IXIO-S CAN: INSTALLATION GUIDE**

# INFRARED SAFETY FIELD

Activate the visible\* spots to verify the position of the IR-curtain.

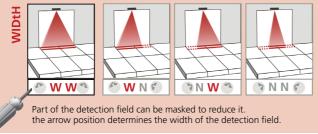

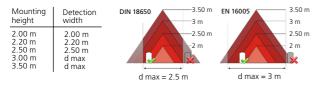

If necessary, adjust the IR-curtain

angle (from -7° to 4°, default 0°).

DOOR

\* Visibility depends on external conditions. When spots are not visible, use the Spotfinder to locate the curtains.
\*\* the distance between the inner curtain of the inside door sensor and the inner curtain of the outside door sensor should always be smaller than 20 cm. the distance to the door leaf depends therefore on the thickness of the door leaf.

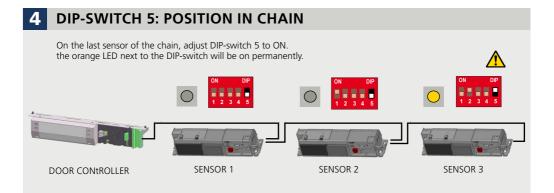

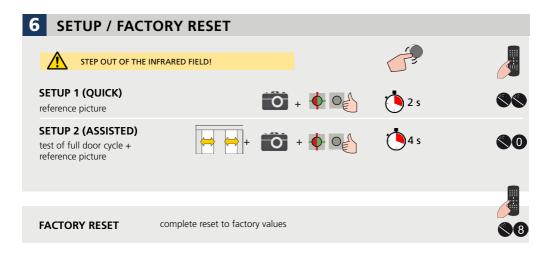

Always verify the actual detection field width with a piece of paper and not the Spotfinder, which detects the whole emitted field.

the size of the detection field varies according to the mounting height and the settings of the sensor. the full door width must be covered.

## TROUBLESHOOTING

<del>)</del>	The ORANGE LED flashes quickly.	DIP-switch setting awaiting confirmation.	Cut and restore power to confirm the DIP-switch setting
E1 🔶	ORANGE LED flashes 1 x.	the sensor signals an internal fault.	1 Replace sensor.
E2 🔶	ORANGE LED flashes 2 x.	the power supply is too low or too high.	<ol> <li>Check power supply.</li> <li>Check wiring.</li> </ol>
E4 🔶	ORANGE LED flashes 4 x.	the sensor receives not enough IR-energy.	<ol> <li>Decrease the angle of the IR-curtains.</li> <li>Increase the IR-immunity filter (values ≥ 2.8 m).</li> <li>Deactivate 1 curtain.</li> </ol>
E5 🔶	ORANGE LED flashes 5 x.	the sensor receives too much IR-energy.	1 Slightly increase the angle of the IR-curtains.
		the sensor is disturbed by external elements.	1 Eliminate the cause of disturbance (lamps, rain cover, door controller housing properly grounded).
E8 🔶	ORANGE LED flashes 8 x.	IR power emitter is faulty.	1 Replace sensor.
$\bigcirc$	ORANGE LED is on.	the sensor encounters a memory problem.	<ol> <li>Cut and restore power supply.</li> <li>If orange LED lights up again, replace sensor.</li> </ol>
☀	RED LED flashes quickly after an assisted setup.	the sensor sees the door during the assisted setup.	<ol> <li>Move the IR-curtains away from the door.</li> <li>Install the sensor as close to the door as possible. If needed, use a bracket accessory.</li> <li>Launch a new assisted setup.</li> </ol>
	RED LED lights up sporadically.	the sensor vibrates.	<ol> <li>Check if the sensor is fastened firmly.</li> <li>Check position of cable and cover.</li> </ol>
		the sensor sees the door.	1 Launch an assisted setup and adjust the IR angle.
		the sensor is disturbed by external conditions.	<ol> <li>Increase the IR-immunity filter to value 3 (&lt; 2,8 m).</li> <li>Select presetting 2 or 3.</li> </ol>
$\bigcirc$	the LED is off.		<ol> <li>Check power supply.</li> <li>Check wiring.</li> </ol>
	the reaction of the door does not correspond to the LED-signal.		1 Check CAN communication.
	the remote control does not react.	the sensor is protected by a password.	1 Enter the right password. If you forgot the code, cut and restore the power supply to access the sensor without entering a password during 1 minute.

## **TECHNICAL SPECIFICATIONS**

12 V - 30 V DC +/-10%
< 2.5 W
2 m to 3.5 m
-25°C to +55°C; 0-95% relative humidity, non condensing
IP54 (IEC/EN 60529)
< 70 dB
Presence typical response time: < 200 ms (max. 500 ms)
Active infrared with background analysis Spot: 5 cm x 5 cm (typ) Number of spots: max. 24 per curtain Number of curtains: 2
CAN
EN 12978 EN ISO 13849-1 PL "c" CAT. 2 (under the condition that the door control system monitors the sensor at least once per door cycle) EN 16005 (protective devices) DIN 18650 (protective devices)

\* External electrical sources must be within specified voltages, max 15W and ensure double insulation from primary voltages.

Specifications are subject to changes without prior notice. All values measured in specific conditions and with a temperatre of 25°C.
