A BROAD SPECTRUM OF SOLUTIONS

BEA designs and manufactures sensing solutions for automatic systems in various fields of activity.

We help facilitate people's access to public buildings, optimize traffic flow in warehouses, protect vehicles in parking lots, count visitors in shopping malls, improve platform safety in stations, secure artwork in museums and much more...

SECURITY & ACCESS SOLUTIONS

VEHICLE SENSING SOLUTIONS

INDUSTRIAL AUTOMATION SOLUTIONS

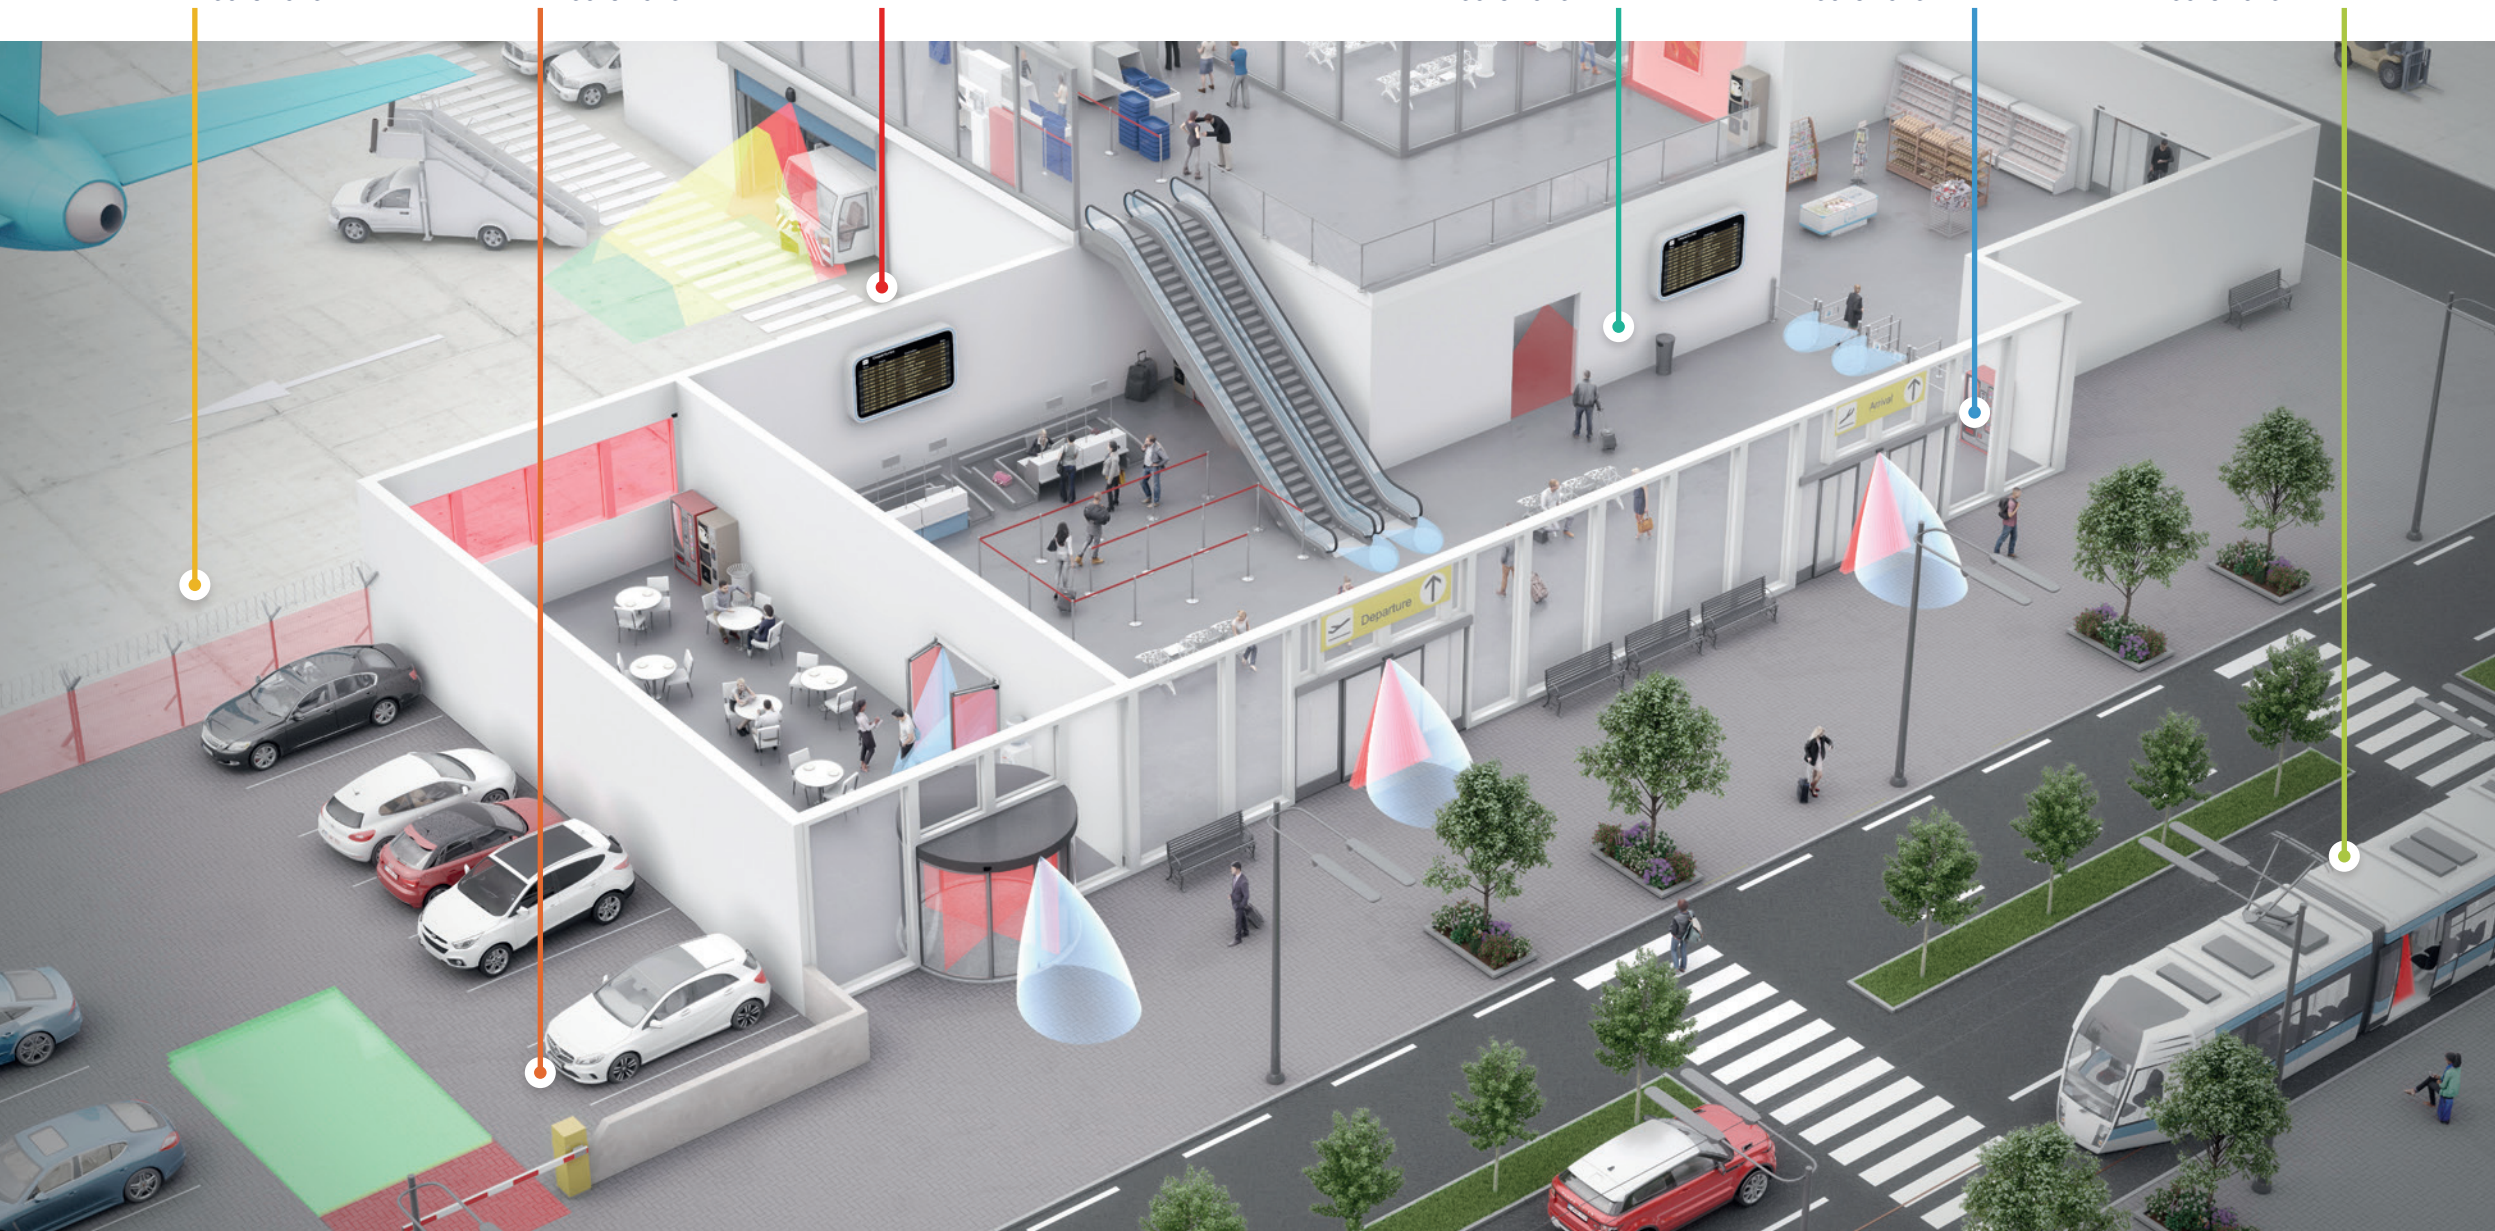

PEOPLE COUNTING SOLUTIONS

PEDESTRIAN SENSING SOLUTIONS

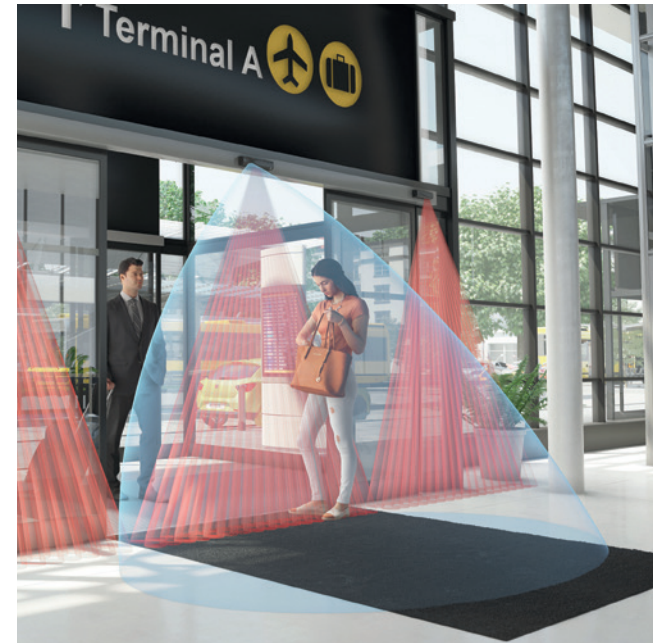

PUBLIC TRANSPORTATION SOLUTIONS

THE RIGHT SOLUTION FOR EVERY APPLICATION

Our goal is to develop sensing solutions that make everyday life easier for you, your customers and all users across a wide variety of applications.

What is your application ?

WHAT

DO YOU NEED ?

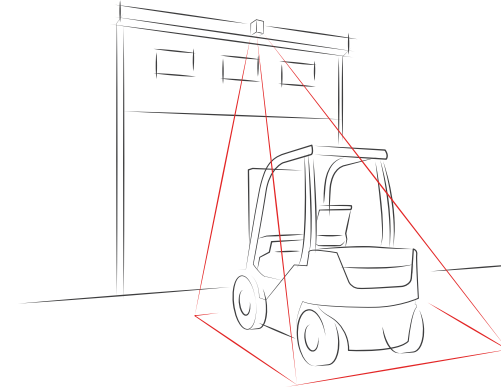

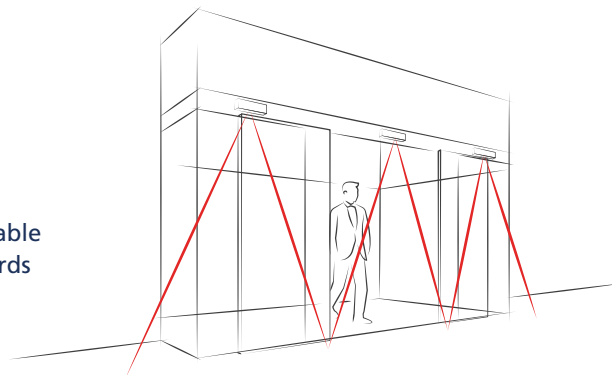

OPENING

We open doors and activate various other automated systems

SAFETY

We protect people in conformity with applicable regulations and standards

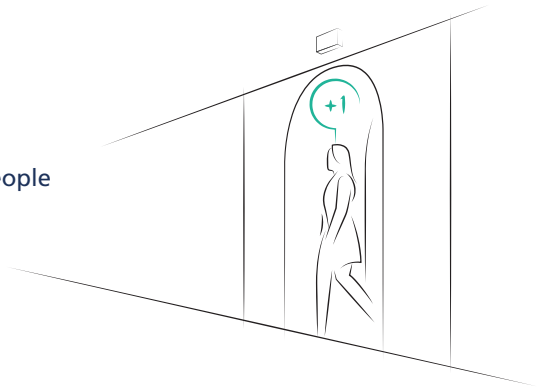

PRESENCE

We protect equipment and doors against damage

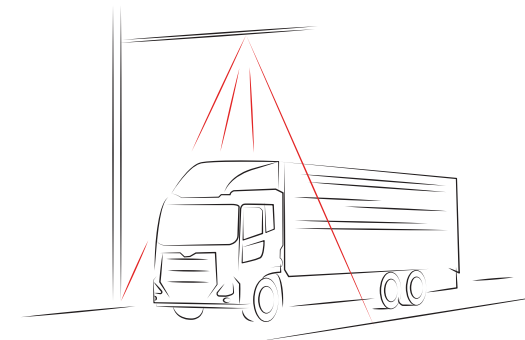

COUNTING

We accurately count people flow in many different environments

RAW DATA

We provide you with measurement data to develop your own application

CONNECTIVITY

We optimize the installation of our products and invest in new communication technologies

BEHIND

THE SCENES

For more than 50 years, our engineers have been researching, developing and integrating the latest technologies into our products to create a diverse range of sensing solutions.

We were the first to use the accurate and fail-safe laser technology in door applications. For many years, radar or microwave technology has been detecting your every move and active infrared technology has proven to keep people safe and protect objects.

READY TO DETECT?

Our sensors detect motion, presence, flow of people, vehicles & objects.

WE CREATE

*Peace
of Mind*

FOR YOUR FUTURE

BECAUSE

You have an eye for detail

Your sense for detail will drive our complete process from the development stage to the after-sales service stage. Our Product Management and Research & Development teams collaborate to provide you with high product usability, our production staff assemble all the pieces with great precision and our Sales and Customer Services teams listen to your specific needs, every day.

In all discretion

Our sensors are looking out for you in many different ways, even if you do not notice them. We aim at streamlined, compact and discrete product design, making sure that our sensors are well integrated into any environment.

Ready, Set, Go!

Intuitive and “plug & play” installation is essential to us, because we know how important it is to save valuable time.

Moreover, our in-house training sessions and online tutorials help the installer to become an expert.

We also work on our sensor connectivity to develop user-friendly interfaces, making the invisible visible.

TUTORIAL VIDEOS

TOMORROW IS ALREADY HERE

What we love above all is to surprise you.
We believe that innovation is the driving force behind success.
Year after year, we have developed state-of-the-art sensors
meeting market needs. What will come next?

*Let's shape
the future
together!*

WE VALUE A

Close Relationship

IT'S IN OUR DNA

In a fast-moving environment, meeting you in person is the key to developing a strong and long-term partnership.

*We are pleased
to meet you,
listen to you
and collaborate
together.*

Our Passion HAS NO LIMITS

We are passionate about what we do and always interested in meeting new talent who share the same values. If you think you've got what it takes, we would love to hear from you.
