

LZR[®]-P220

SAFETY SENSOR FOR SECURING THE CLOSING EDGE ON REVOLVING DOORS

ZI C

User's Guide for software version 0300 and more (refer to tracking label on product)

DESCRIPTION

- 1. laser sweep emission
- 2. laser sweep reception
- 3. LED-signal (4)
- 4. screw for position lock (2)
- 5. connector

- 6. protection cover
- 7. visible laser beam (3)
- 8. notch for tilt angle adjustment (2)
 - 9. adjustable bracket
 - 10. cable conduit (4)

LED-SIGNAL

adjustments

SAFETY

The device emits invisible (IR) and visible laser radiation. IR laser: wavelength 905 nm; output power <0.10 mW (Class 1 according to IEC 60825-1) Visible laser: wavelength 635 nm; output power <1 mW (Class 2 according to IEC 60825-1)

The visible laser beams are inactive during normal functioning. The installer can activate the visible lasers if needed. Do not stare into visible laser beams.

CAUTION!

Use of controls, adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

Do not stare into the visible red laser beams.

The warranty is void if unauthorized repairs are made or attempted by unauthorized personnel.

Only trained and qualified personnel may install and adjust the sensor.

Test the good functioning of the installation before leaving the premises.

The manufacturer of the door system is responsible for carrying out a risk assessment and installing the sensor and the door system in compliance with applicable national and international regulations and standards on door safety. Other use of the device is outside the permitted purpose and can not be guaranteed by the manufacturer. The manufacturer cannot be held responsible for incorrect installations or inappropriate adjustments of the sensor.

INSTALLATION AND MAINTENANCE

Avoid extreme vibrations.

Do not cover the front screens.

Avoid moving objects and light sources in the detection field.

Avoid the presence of smoke and fog in the detection field.

Avoid condensation.

Avoid exposure to sudden and extreme temperature changes. cleaning.

Avoid direct exposure to high pressure cleaning.

Do not use aggressive products to clean the front screens.

Wipe the front screens regularly with a clean and damp cloth.

Keep the sensor permanently powered in environments where the temperature can descend below 0°C.

MOUNTING

The curtain should be positioned alongside the closing edge.

Use the adhesive mounting template to position the sensor correctly. The grey area indicates the detection range.

Drill 4 holes as indicated on the mounting template. Make a hole for the cable if possible.

The LBA can be used to mount the sensor to the ceiling.

Pass the cable +/- 10 cm though the cable opening. If drilling an opening is not possible, use the cable conduits on the back side of the bracket.

Position the bracket and fasten the 4 screws firmly in order to avoid vibrations.

Open the protection cover, plug the connector and position the cable in the slit.

Close the protection cover and fasten it firmly.

Position the housing on the bracket.

Turn the sensor until the two triangles are face to face.

5

Door control without test: connect red and blue wires to power supply without polarity (excludes conformity with DIN 18650 and EN 16005).

IRIS ON C RETROFIT

If replacing an IRIS ON C sensor, use the retrofit cable kit (sold as accessory) to connect the LZR $^{\circ}$ -P220 to the IRIS ON C cable.

Depending on the polarity, you need to choose the black or grey cable:

POSITIONING

Unlock the sensor and activate the visible laser beams.

The visible laser beams indicate approximately the postion of the first curtain and limit the angle of the detection field.

The visible laser beams stay activated for 15 minutes or can be turned off the same way they were activated.

Adjust the **lateral position** of the detection field.

Adjust the **tilt angle** of the detection field with the hex key.

Avoid reflections of the visible laser beam on the pole.

TEACH-IN

Launch a teach-in to end the installation procedure, after changing the sensor position or when new objects are added to or changed in the detection zone.

The detection field should be free of snow buildups, heavy rain, snowfall, fog or other moving objects.

During teach-in, the sensor learns its surroundings and adapts the detection field shape to these. Objects in the detection field will be cut out.

At the end of the installation, enter an access code to avoid vandalism.

IMPORTANT: Test the good functioning of the installation before leaving the premises.

REMOTE CONTROL ADJUSTMENTS (OPTIONAL)

FIELD WIDTH	(E) 010-100 025	
	10 cm 100 cm 25 cm	
	< 20 cm does not allow conformity with EN 16005 / DIN 18650

4 EN 16005 / DIN 18650

HOW TO USE THE REMOTE CONTROL

🗊 🔆 09090909 🔶

If the red LED flashes quickly after unlocking, you need to enter an access code from 1 to 4 digits.

To end an adjustment session, always lock the sensor.

TROUBLESHOOTING

\bigcirc	No blue LED	There is no power.	1 Check cable and connexion.
		The polarity of the power supply is inverted.	1 Check the polarity of the power supply.
\bigcirc	Only the blue LED is on.	The test input is not connected.	1 Check wiring. The RED and BLUE cable have to be connected to the test input or the power supply.
\bigcirc	The detection LED remains green.	The detection field is too small or deactivated.	 Check the size of the fields. Launch a teach-in.
		The object size is too small.	1 Decrease the min. object size.
	The detection LED remains red.	Someone or something is in the detection field.	1 Step out of the field and/or remove the any object(s) from the field.
		The field is touching the floor, the wall or the door, which leads to detection.	 Activate the 3 red beams and check if the position of the sensor is correct. If not, adjust the hex screws. Verify the field size. Launch a teach-in.
<u></u>	The orange LED is flashing and the detection LEDs are red.	No background (reference point) is found.	 Check the position of the sensor. Check the mounting side setting. If there is no background, set the mounting side to value 3 to 4. Launch a new teach-in.
		The sensor is masked.	1 Verify and clean the front screens with a damp cloth.
\bigcirc	The orange LED is on.	The power supply voltage is exceeding the acceptable limits.	1 Check the power supply voltage.
		The sensor exceeds its temperature limits.	1 Verify the outside temperature where the sensor is installed. Eventually protect the sensor from sunlight using a cover.
		Internal error	1 Wait a few seconds. If the LED remains ON, reset the power supply. If the LED turns on again, replace the sensor.
	The sensor does not respond to the remote control.	The batteries in the remote control are not installed properly or dead.	1 Verify or replace the batteries.
		The remote control is badly pointed.	1 Point the remote control towards the sensor, but with a slight angle. The RC should not be pointed in a right angle in front of the sensor.
		A reflective object is in close proximity to the sensor.	1 Avoid highly reflective material in proximity to the sensor.
¥	The sensor does not unlock.	You have to enter an access code or the wrong code was entered.	1 Cut and restore power supply. No code is required to unlock during the first minute after powering.

TECHNICAL SPECIFICATIONS

T 1 1	
Technology:	laser scanner, time-of-flight measurement
Detection mode:	motion and presence
Max. detection range:	5 m x 1 m (at max. 4 m according to EN 16005, DIN 18650)
Remission factor:	> 5 % IR laser wavelength
Angular resolution:	0,3516 °
Min. detected object size (typ.):	2,1 cm @ 3 m ; 3,5 cm @ 5 m (in proportion to object distance)
Testbodies:	700 mm x 300 mm x 200 mm (CA according to EN 16005, DIN 18650)
	Ø 50 mm @ max. 4 m (CB according to DIN 18650)
Emission characteristics:	(IEC/EN 60825-1)
IR laser:	wavelength 905 nm; output power <0.10 mW (CLASS 1)
Red visible laser:	wavelength 635 nm; output power <1 mW (CLASS 2)
Supply voltage:	10-35 V DC @ sensor side (to be operated from SELV compatible power supplies only)
Power consumption:	< 5 W
Peak current at power-on:	2.2 A (max. 22 ms @ 24 V)
Cable length:	5 m
Response time:	typ. 80 ms; max. 150 ms
Output:	1 output NO or NC (galvanic isolated - polarity free)
Max. switching voltage:	35 V DC / 24 V AC
Max. switching current:	80 mA (resistive)
Switching time:	t _{on} =5 ms; t _{off} =5 ms
Output resistance:	typ 30 Ω
Voltage drop on output:	< 0.7 V @ 20 mA
Leakage current:	< 10 µA
Input:	1 optocoupler (galvanic isolated - polarity free)
Input: Max. contact voltage:	1 optocoupler (galvanic isolated - polarity free) 30 V DC (over-voltage protected)
Max. contact voltage:	30 V DC (over-voltage protected)
