HOW TO USE THE LCD?
DISPLAY DURING NORMAL FUNCTIONING

Opening impulse | Safety

Negative display = active output

To adjust contrast, push and turn the grey button simultaneously.

During normal function only.

FACTORY VALUE VS. SAVED VALUE

AIR:Immunity <2.8m 2

displayed value = factory value

AIR:Immunity >2.8m

displayed value = saved value

NAVIGATING IN MENUS

Push to enter the LCD-menu

3 INFRARED SAFETY FIELD

ANGLE

Activate the visible* spots to verify the position of the IR-curtain.

CLOSER / **AWAY**

If necessary, adjust the IR-curtain angle (from -7° to 4°, default 0°).

DOOR

max. 9 cm**

* Visibility depends on external conditions. When spots are not visible, use the Spotfinder to locate the curtains.
** The distance between the inner curtain of the inside door sensor and the inner curtain of the outside door sensor should always be smaller than 20 cm. The distance to the door leaf depends therefore on the thickness of the door leaf.
WIDTH
Part of the detection field can be masked to reduce it.
The arrow position determines the width of the detection field.

Always verify the actual detection field width with a piece of paper and not the Spotfinder, which detects the whole emitted field.

Additional adjustments are possible by LCD or remote control (see p. 5)

Mounting height	Detection width
2.00 m	2.00 m
2.20 m	2.20 m
2.50 m	2.50 m

The size of the detection field varies according to the mounting height and the settings of the sensor. The full door width must be covered.

TROUBLESHOOTING

E1	ORANGE LED flashes 1 x.	The sensor signals an internal fault.	**1**	Replace sensor.
E2	ORANGE LED flashes 2 x.	The power supply is too low or too high.	**1**	Check power supply (in the diagnostics menu of the LCD).
			2	Check wiring.
E3	ORANGE LED flashes 3 x.	The previous sensor in the daisy chain is faulty	**1**	Replace previous sensor in the chain
		The SDC setting does not match with the real product position	**1**	Lock the SDC position setting
E4	ORANGE LED flashes 4 x.	The sensor receives not enough IR-energy.	**1**	Decrease the angle of the IR-curtains.
			2	Increase the IR-immunity filter (values >2.8 m).
			3	Deactivate 1 curtain.
E5	ORANGE LED flashes 5 x.	The sensor receives too much IR-energy.	**1**	Slightly increase the angle of the IR-curtains.
		The sensor is disturbed by external elements.	**1**	Eliminate the cause of disturbance (lamps, rain cover, door controller housing properly grounded).
E8	ORANGE LED flashes 8 x.	IR power emitter is faulty.	**1**	Replace sensor.
	ORANGE LED is on.	The sensor encounters a memory problem.	**1**	Cut and restore power supply.
			2	If orange LED lights up again, replace sensor.
	RED LED flashes quickly after an assisted setup.	The sensor sees the door during the assisted setup.	**1**	Move the IR-curtains away from the door.
			2	Install the sensor as close to the door as possible. If needed, use a bracket accessory.
			3	Launch a new assisted setup.
	RED LED lights up sporadically.	The sensor vibrates.	**1**	Check if the sensor is fastened firmly.
			2	Check position of cable and cover.
		The sensor sees the door.	**1**	Launch an assisted setup and adjust the IR angle.
		The sensor is disturbed by external conditions.	**1**	Increase the IR-immunity filter to value 3.
			2	Select presetting 2 or 3.
	GREEN LED lights up sporadically.	The sensor is disturbed by rain and/or leaves.	**1**	Select presetting 2 or 3.
			2	Increase radar-immunity filter.
		Ghosting created by door movement.	**1**	Change radar field angle.
		The sensor vibrates.	**1**	Check if the sensor and door cover is fastened firmly.
			2	Check position of cable and cover.
		The sensor sees the door or other moving objects.	**1**	Remove the objects if possible.
			2	Change radar field size or angle.
	The LED and the LCD-display are off.		**1**	Check wiring.
	The reaction of the door does not correspond to the LED-signal.		**1**	Check output configuration setting.
			2	Check wiring.
	The LCD or remote control does not react.	The sensor is protected by a password.	**1**	Enter the right password. If you forgot the code, cut and restore the power supply to access the sensor without entering a password during 1 minute.

INSTALLATION

The sensor should be fixed firmly to avoid extreme vibrations.

Do not cover the sensor.

Avoid moving objects and light sources in the detection field.

Avoid highly reflective objects in the infrared field.
MAINTENANCE

It is recommended to clean the optical parts at least once a year or more if required due to environmental conditions.

Do not use aggressive products to clean the optical parts.

SAFETY

The door control unit and the door cover profile must be correctly earthed.

Only trained and qualified personnel may install and setup the sensor.

Always test the good functioning of the installation before leaving the premises.

The warranty is invalid if unauthorized repairs are made or attempted by unauthorized personnel.

⚠
- The device cannot be used for purposes other than its intended use. All other uses cannot be guaranteed by the manufacturer of the sensor.
- The manufacturer of the door system is responsible for carrying out a risk assessment and installing the sensor and the door system in compliance with applicable national and international regulations and standards on door safety.
- The manufacturer of the sensor cannot be held responsible for incorrect installations or inappropriate adjustments of the sensor.
